SUMMARY

Software Developer with hands-on experience building REST APIs and real-time applications. Skilled in database query optimization, concurrent request handling, and backend testing. Focused on understanding requirements, reasoning through design trade-offs, and delivering reliable, scalable backend solutions.

TECHNICAL SKILLS

- **Languages:** Python, Java, SQL, JavaScript
- **Frameworks & Backend:** FastAPI, Django, Flask, Node.js, Express.js
- **Big Data & Architecture:** PySpark, REST APIs, WebSockets
- **Databases & Caching:** MySQL, PostgreSQL, Redis, MongoDB
- **Frontend:** HTML/CSS, React.js, Next.js
- **Cloud, DevOps & Tools:** AWS, Docker, Git, CI/CD, Postman, pytest, Agile/Scrum

WORK EXPERIENCE

Full Stack Developer Intern | KodNest — Feb 2026 – Aug 2026

- Engineered backend REST APIs using FastAPI and MySQL in an Agile/Scrum environment, writing robust unit/integration tests using pytest to secure data flows for thousands of records.
- Slashed database query time by 85% (from 4.0s to 0.6s) by profiling MySQL execution plans and adding 3 targeted foreign key indexes to eliminate full-table scans.

Web Developer Intern | SkillXAcademy — Aug 2025 – Jan 2026

- Built a fully responsive E-commerce product catalog using JavaScript, HTML, and CSS to securely consume REST APIs and dynamically render UI components.
- Cut page load time by 40% (from 2.5s to 1.5s) by eliminating duplicate API requests, implementing browser caching, and efficiently batching DOM updates.

PROJECTS

Fault-Tolerant Ticketing System | FastAPI, Redis, PostgreSQL, RabbitMQ — GitHub

- Engineered a Redis-backed distributed seat-locking API with a strict **5-minute TTL**, routing **10,000+ peak concurrent users** and processing **1,000+ lock requests/sec** with **0 double-bookings**.
- Designed an ACID-compliant PostgreSQL wallet processing **50,000+ mock transactions**, using RabbitMQ to decouple heavy background jobs, reducing transaction latency to **less than 50 milliseconds** and ensuring **100% payment finality**.
- Implemented an idempotent transaction pipeline with RabbitMQ Dead-Letter Exchanges (DLX), preventing **100% of duplicate debits** across **5,000+ concurrent checkouts** and recovering worker failures in **under 200 ms**.

Gated Real-Time Auction Engine (Low Latency) | FastAPI WebSockets, Redis Pub/Sub, PostgreSQL — GitHub

- Architected a WebSocket engine backed by Redis Pub/Sub, broadcasting **15,000+ live bids/minute** across **50+ simultaneous auction rooms** supporting **5,000+ active users** with **less than 20 milliseconds** latency.
- Built a PostgreSQL state machine for automated KYC access control, parsing **2,000+ identity checks**, rejecting **100% of unverified attempts**, and reducing simulated bot-driven traffic by **95%**.
- Devised atomic bid-validation logic using Redis Lua scripts, eliminating race conditions across **50,000+ rapid bids** and guaranteeing **sub-millisecond sequential ordering**.

EDUCATION

The Oxford College of Engineering — 2022 – 2026

Bachelor of Engineering in Information Science and Engineering — CGPA: 8.08/10

CERTIFICATIONS

IBM DevOps and Software Engineering Professional Certificate — IBM, Coursera

Introduction to Data Analysis Using Python — Google, Coursera

Introduction to HTML5, CSS3, and JavaScript — IBM, Coursera
